

BEWI-SAN Piglet Start

Post-colostrum milk for larger litters and in case of insufficient colostrum intake

- ✓ Supports the immunity and reduces the mortality rate
- ✓ Reduces risk of neophobia, more piglets can stay with the mother sow
- ✓ Nourishes the GIT tissue, this increases feed intake during the entire rearing period

Features

- Contains immunoglobulins and special antibody enriched egg powder to support the piglet's immunity
- With isotonic premix to protect the sensitive gut tissue
- Flavoured with colostrum notes to increase intake

Application

- Dilute 200 g **BEWI-SAN Piglet Start** in 1 litre lukewarm water (max. 40 °C)
- Provide in small amounts in a trough for 2 or 3 times daily
- Administer the first 4-5 days post birth

Packaging

3 kg bucket

10 kg bucket
